

The Mini Crimp is the smallest functional component in the Boundless Beads range. It enhances crimping work, allowing the choice of beads to make their statement. Worked with Eyeline® 49 strand 0.45mm (018") stainless steel cable. The crimps sit snugly and become almost invisible on the cable. The Mini Crimp also works beautifully with 0.61mm diameter cable.

1. To create the perfect crimp, squeeze gently with the tips of your Chain nose pliers just enough to hold the crimp in location. Then double check the measurement; if it is not quite correctly positioned you can usually nudge the crimp a fraction to exactly where you want it placed. A final squeeze to completely secure the crimp. Finally check the neighbouring beads do not slide over the crimp. If the crimp requires extra width, give a firmer squeeze to flatten the crimp, making it wider.
